Certified Programme- & Project Management  
IRCA Certified Construction Certified

## COMPANY PROFILE

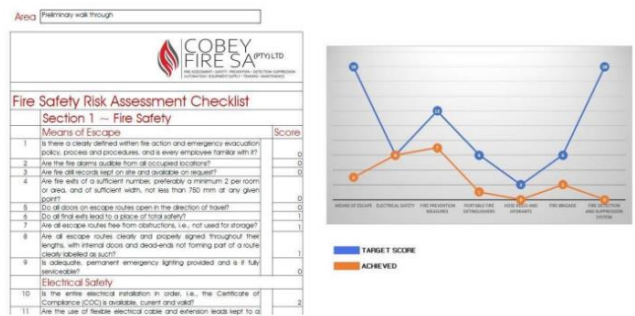

### ABOUT US

We are a leading force in the fire assessment, safety, detection, prevention and suppression infrastructure space and offer a complete service, with our core focus on fire prevention and protection services.

#### FIRE SAFETY RISK ASSESSMENT

The assessment is done following the *National Building Regulations* and *Building Standards Act, SANS 10400, SANS 10139, and SANS 1186-1*.

It is followed by a comprehensive report that indicates shortfalls and recommends remedial action to comply with the insurance industry requirements.

#### FIRE DETECTION, PREVENTION & SUPPRESSION

We design and engineer our fire detection, prevention and suppression systems with each client's specific needs in mind.

We will address all levels of potential threats to your business.

Our goal is to provide you with the peace of mind you deserve, and specialised solutions are our speciality.

#### ACCESS-CONTROL

Access control, simply put, prevents individuals from entering places where they do not belong.

Access control enhances security by eliminating the need for keys which can easily fall into the wrong hands or become lost.

#### TECHNICAL & BUSSINESS DOCUMENTATION

Any business should know that they need to have a recorded system to ensure consistency and compliance with the business's mission, values and strategic goals.

We have the expertise to produce what applies to your business and will gladly assist in getting it done.

 SANS 1039 PART 1 AND 2 CERTIFIED  
 Health and Safety U/STD 113852 Certified  
 Certified Programme- & Project Management

### GAS SYSTEM LOGBOOK

### TRAINING

On-site, practical training is provided to groom in-house, knowledgeable staff to ensure that the fire system's integrity is safeguarded; that it can sound an alarm and suppress a fire condition should the need arise; that required checks taken are updated in the designated logbook, as mandated by the manufacturer and applicable legislation.

A hands-on test will be conducted after the practical training is completed, and a certificate will be issued if performed successfully.

### MAINTENANCE

Our maintenance team's objective is to adhere to the prescribed and mandatory maintenance schedules to maximise the reliability of the fire system and equipment, and to meet the mandated requirements of the relevant design, installation and commissioning standards.

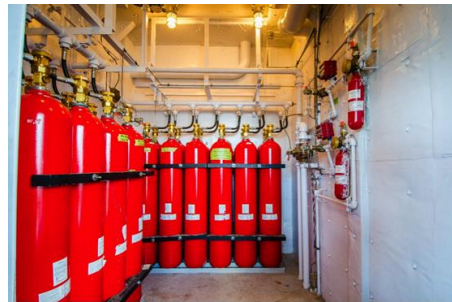

This objective provides a systematic and uniform basis for trained SAQCC personnel to conduct the mandated physical service work.

### EQUIPMENT SUPPLY

We offer a comprehensive range of equipment that is specifically designed to increase the level of safety in your business environment.

By first understanding your overall fire detection, prevention and suppression infrastructure requirements we can choose the most appropriate design for the risk at hand and the finances available.

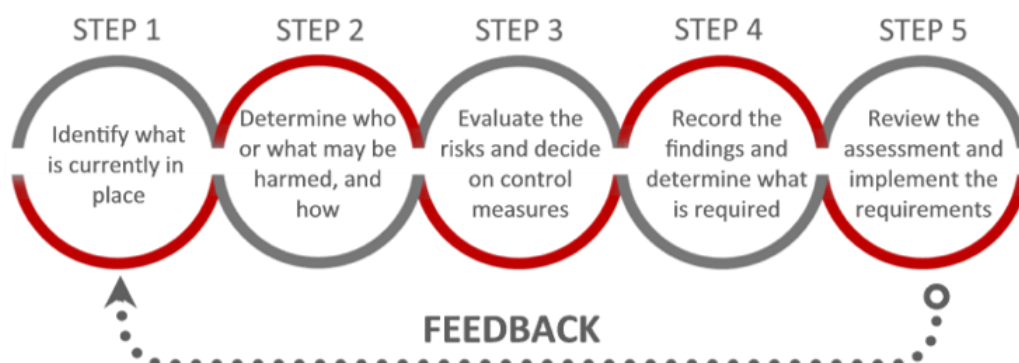

Our hands-on experience, our wealth of industry-appropriate training, and the correct certifications ensure that we are ideally positioned to address your fire-related requirements; including safety, prevention, detection, and suppression, and any other related ancillary requirements that you may have.

Because we understand the science of fire, we can present the best advice and solutions to protect people, property, assets, and the environment.

## OUR APPROACH

Our professional commitment is the key on which we base our ethical principles and values.

We spend the time to really understand your requirements and always ensure that we deliver a quality, fit-for-purpose solution.

## IN CLOSING

We have established a task team to specifically address the requirements and the issues associated with fire detection and suppression systems.

As the initial step, we offer a Fire Safety Risk Assessment and produce a comprehensive report to address the issues that may impact your business's ability to comply with the National Building Regulations and Building Standards, or with any similar applicable legislation, that is required by the asset insurance companies for the maintenance and servicing of all fire protection and firefighting equipment.
